

Consent to Access Medication and Vaccine History

DOC PAM, PA uses SureScripts, Inc., which is a prescription system that **allows prescriptions and related information to be exchanged between healthcare providers and the pharmacy.** The information sent between these systems may include details of any and all prescription drugs that your child may be taking and/or has taken in the past. Information may also include diagnoses and personal health information. The purpose of this exchange is so that DOC PAM can make appropriate medical decisions that may be affected by medications and usage. This exchange also allows pharmacies to accurately fill medications and bill your insurance appropriately.

DOC PAM, PA also has access to update and download your child's **vaccine history** through the **FLORIDA SHOTS state registry.** This information may also be downloaded into our Electronic Medical System. This will help keep your child's vaccine history accurate, current, and readily available so that "shot forms" can be provided for school, camps, and other activities.
